Communications

Visitor access to closed communities is normally one of the most difficult and time consuming security aspects to control

The ClickOn visitor access system is installed at the main gate of the enclosed community and used by the guard or visitor to make verbal contact with the resident, once contact has been established and the visitor identified, access can be granted by the resident via a secure DTMF code typed in on his / her phone

Features and Options Include:

Resident access control via Remotes, Cards, Tags or Biometric access control

Automatic multiple telephone number dialling per stand

Resident contact details remain confidential at all times

Visitor pre-clearance access codes can be requested via sms

Community Bulk sms facility

Itemised billing per stand / house

“DND” Do not disturb function via sms

Voice and visual guidance menu on intercom panel

Guard “watch dog” ensures that the guard is on duty

Full recording of access logs and codes issued / used

Only resident telephone numbers can dial to and be dialled from the system, thereby eliminating costly personal calls made by the operators

Vandal and weather resistant stainless steel unit

Telephone call durations are restricted limiting call time dramatically (call durations are auditable)

Seamless and transparent database and software upgrading off site via the www

**Secure opening of booms and gates
by residents only via DTMF code**

ID Scan Visitor Vehicle and Driver Licence scanning

CCTV integration with video data mining of visitor and resident access and egress events
